

The sprinklers and drip lines are regulated by moisture sensors and do not operate if the sensors determine there is adequate soil moisture. If irrigation is needed the following is the schedule for both common areas and residential areas. The sprinklers run after 9PM to reduce the amount of evaporation. They run intermittently (in 3 to 5 minute sprays with soak in times between sprays). The drip lines can run anytime during the day.

	Common Areas	Residential Areas
Sprinklers	Mon. & Thurs.	Tues. & Fri.
Drip Lines	Thursday	Tuesday
